

## DEC 8

Laurie Mann 2:07 PM

When we commit the changes to the faq-draft.md; what commit option is recommended?

James Wilson 2:07 PM

I was doing my homework and I followed the instructions to upload a screenshot of the GitHub error with the commit, and it changed my homework and said that I did not need Google Studio and skipped it. and went to the n8n workflows immediately...it that proper?

Patricia 2:09 PM

I wanted to change some providers: like Gemini Assist Code, Docker and N8N local, but it keeps going back to your onboarding.md how do I change that.

Bhavik 2:15 PM

When building automations in n8n, how do you architect it to ensure enterprise-grade data security, specifically around access control, data storage, and credential handling, so sensitive business data is protected end-to-end?

Simpatico Design Studio 2:15 PM

after I delete the APIs I give Claude, what are all the places I will need to go back and changes after I delete it?

Priyanka Pradhan 2:19 PM

I am stuck with automatically setting up these workflows in n8n. I dont see the n8n Setting-> Create API in my trial version.

Priyanka Pradhan 2:20 PM

Or do I have to manually create these flows in n8n 1 by 1 from the repo?

Tatiana Safronova 2:20 PM

Could not connect VS Code and Claude (not sure, if terminology is right:) ... I have an error message that I have not resolved yet

Khadijah Sellers 2:25 PM

I am receiving errors in n8n. Now I don't know what I need to do to use the update. That may fix my issues,

Khadijah Sellers 2:27 PM

I have a problem with my Store node. It's red.

Lea Emery 2:47 PM

Just to be pedantic - after Claude Code gets things set up with API keys... we have to go back and make manual updates in n8n with the actual keys.... oh just answering now... but we still need the new key and do it manually right?

Simpatico Design Studio 3:31 PM

I have the same question

Christine 2:52 PM

I am having such a hard time getting an API Key. have been working with Claude since before class to get one set up. I finally got to the api key window and now i am getting a failed to create project access denied. I am an incognito window to even get to this function.

Christine 3:18 PM

still stuck on this item. Claude is having make it in a cloud account. Question: is the audience for the app, internal or external?

Christine 3:35 PM

I got it but not sure why so difficult. Older Google account. This is Claude bashing Google: You're welcome! Yeah, Google definitely doesn't make this intuitive - you had to navigate through a maze just to get an API key. The good news is you only have to do this once, and now you know the path: Google Cloud Console → APIs & Services → Credentials → Create Credentials → API Key.

Julian Mota 3:05 PM

where is the link to THE Stacks?

Simpatico Design Studio 3:32 PM

[http://localhost:3000:](http://localhost:3000)

Ching 3:23 PM

Is it easy to redo the proper way, if I have already have some of the HW part 2 done manually (my CC told me to do it manually. I didn't know I could make it do it), but missing the Stack. the google API and FileSearchStore ID have been setup, and n8n setup manually with the old files. Can I just redo, and re-upload? Or will it be issues?

Simpatico Design Studio 3:33 PM

having the same problem. can't add stacks because we did it manually. it's not connecting.

Nathalia Carbajal 3:23 PM

I created my corpus via the API and have the corpus ID. Where in the UI can I see my corpora? I don't see a 'Corpora' option in my Build menu.

Lisa Fitzharris 3:24 PM

I see that the new repo downloaded today has 4 new Echo workflows. When I open them in N8N they look the same. Meaning there were (2) Processors and (2) Triggers which one or version should we use? The 02, 03 v2 versions or the v2 with the 120825 date only? Maybe it does not matter?

sinan Kaybal - MEKA Global 3:28 PM

12.08 only

Nathalia Carbajal 3:29 PM

Hi! I created my knowledge base (corpus) using the Gemini API instead of the web interface, and I have my corpus ID documented. However, when I go to Google AI Studio and click on 'Build' in the left sidebar, I don't see a 'Corpora' or 'Stacks' option in the menu - I only see Start, Gallery, Your apps, and FAQ.

Where in the current Google AI Studio interface can I view my existing corpora? I want to verify that my 5 uploaded files are visible in the UI, even though I know they exist via the API.

Gwen Mitchell 4:06 PM

When using the subagents... there are two options... you can get your main "project manager" start its own subagents or give you a prompt to feed a new claude chat where you will drop the prompt for it to run separately. Correct?

Nathalia Carbajal 4:12 PM

Hi! I created my knowledge base (corpus) using the Gemini API instead of the web interface, and I have my corpus ID documented. However, when I go to Google AI Studio and click on 'Build' in the left sidebar, I don't see a 'Corpora' or 'Stacks' option in the menu - I only see Start, Gallery, Your apps, and FAQ.

Where in the current Google AI Studio interface can I view my existing corpora? I want to verify that my 5 uploaded files are visible in the UI, even though I know they exist via the API. Will it be ok that I can't visually see The Stacks URL?

Marcello 4:25 PM

Can it be that Claude Pro blocks after a while?

Limit reached · resets 10pm (Europe/Zurich) · /upgrade to Max or turn on /extra-usage

TT 4:26 PM

If I still haven't done the homework - do I need to sign up for n8n pro?
